

Other titles available in the ENVIRONMENTAL HEALTH
CRITERIA series include:

1. Mercury
2. Polychlorinated Biphenyls and Terphenyls
3. Lead
4. Oxides of Nitrogen
5. Nitrates, Nitrites and N-Nitroso Compounds
6. Principles and Methods for Evaluating the Toxicity of Chemicals, Part I
7. Photochemical Oxidants
8. Sulfur Oxides and Suspended Particulate Matter
9. DDT and its Derivatives
10. Carbon Disulfide
11. Mycotoxins
12. Noise
13. Carbon Monoxide
14. Ultraviolet Radiation
15. Tin and Organotin Compounds
16. Radiofrequency and Microwaves
17. Manganese
18. Arsenic
19. Hydrogen Sulfide
20. Selected Petroleum Products
21. Chlorine and Hydrogen Chloride
22. Ultrasound
23. Lasers and Optical Radiation
24. Titanium
25. Selected Radionuclides
26. Styrene

This report contains the collective views of an international group of experts and does not necessarily represent the decisions or the stated policy of the United Nations Environment Programme, the International Labour Organization, or the World Health Organization

GUIDELINES ON STUDIES IN ENVIRONMENTAL EPIDEMIOLOGY

Published under the joint sponsorship of
the United Nations Environment Programme,
the International Labour Organisation,
and the World Health Organization

INVENTARIO N. 30

World Health Organization
Geneva, 1983

CONTENTS

	<u>Page</u>
PREFACE	12
1. INTRODUCTION	25
1.1 Interrelationships with toxicological studies	25
1.2 Design	26
1.3 Environmental agents and assessment of exposures	28
1.4 Effects on health	30
1.5 Organization and conduct	32
1.6 Analysis and interpretation of results	34
1.7 Uses of epidemiological information	35
REFERENCES	37
2. STUDY DESIGNS	39
2.1 Introduction	39
2.2 Preliminary review of state of knowledge	40
2.3 Descriptive studies and use of existing records	40
2.3.1 Mortality statistics	41
2.3.2 Morbidity statistics	43
2.3.3 Populations at risk	44
2.3.4 Geographical differences in mortality and morbidity	44
2.3.5 Time trends	46
2.3.6 Associations with environmental indices	47
2.3.7 Case registers	47
2.3.8 General surveys	48
2.4 Formulation of hypotheses	48
2.5 Cross-sectional studies	49
2.6 Prospective and follow-up studies	55
2.7 Retrospective cohort studies	60
2.8 Time-series studies	61
2.9 Case-control studies	62
2.10 Controlled exposure studies	66
2.11 Monitoring and surveillance	67
REFERENCES	68

The **International Programme on Chemical Safety (IPCS)** is a joint venture of the United Nations Environment Programme, the International Labour Organisation, and the World Health Organization. The main objective of the IPCS is to carry out and disseminate evaluations of the effects of chemicals on human health and the quality of the environment. Supporting activities include the development of epidemiological, experimental laboratory, and risk-assessment methods that could produce internationally comparable results, and the development of manpower in the field of toxicology. Other activities carried out by IPCS include the development of know-how for coping with chemical accidents, coordination of laboratory testing and epidemiological studies, and promotion of research on the mechanisms of the biological action of chemicals.
