

Other titles available in the ENVIRONMENTAL HEALTH CRITERIA series include:

1. Mercury
2. Polychlorinated Biphenyls and Terphenyls
3. Lead
4. Oxides of Nitrogen
5. Nitrates, Nitrites, and N-Nitroso Compounds
6. Principles and Methods for Evaluating the Toxicity of Chemicals, Part 1
7. Photochemical Oxidants
8. Sulfur Oxides and Suspended Particulate Matter
9. DDT and its Derivatives
10. Carbon Disulfide
11. Mycotoxins
12. Noise
13. Carbon Monoxide
14. Ultraviolet Radiation
15. Tin and Organotin Compounds
16. Radiofrequency and Microwaves
17. Manganese
18. Arsenic
19. Hydrogen Sulfide
20. Selected Petroleum Products
21. Chlorine and Hydrogen Chloride
22. Ultrasound
23. Lasers and Optical Radiation
24. Titanium
25. Selected Radionuclides
26. Styrene
27. Guidelines on Studies in Environmental Epidemiology
28. Acrylonitrile
29. 2,4-Dichlorophenoxyacetic Acid (2,4-D)
30. Principles for Evaluating Health Risks to Progeny Associated with Exposure to Chemicals during Pregnancy
31. Tetrachloroethylene
32. Methylene Chloride
33. Epichlorohydrin
34. Chlordane
35. Extremely Low Frequency (ELF) Fields
36. Fluorine and Fluorides
37. Aquatic (Marine and Freshwater) Biotoxins
38. Heptachlor
39. Paraquat and Diquat
40. Endosulfan
41. Quinotozene
42. Tecnazene
43. Chlordecone
44. Mirex
45. Camphechlor

	<u>Page</u>
GUIDELINES FOR THE STUDY OF GENETIC EFFECTS IN HUMAN POPULATIONS	7
CONTRIBUTORS	9
PREFACE	11
1. INTRODUCTION	13
2. METHODOLOGICAL AND EPIDEMIOLOGICAL ISSUES	13
2.1 General considerations	13
2.2 Methodological issues	13
2.3 Epidemiological considerations - common components	14
2.3.1 Study samples	14
2.3.2 Comparison samples	15
2.3.3 Confounding variables	15
2.3.4 Interaction	15
2.3.5 Methods for estimating exposure	16
2.3.6 End-points	16
2.3.7 Dose-response relationships	16
2.3.8 Time-response relationships	17
2.3.9 Problems in sample size and interpretation of findings	17
2.4 Long-term medical follow-up	18
2.4.1 Relevance and limitations	19
2.4.2 Personal identification	19
2.4.3 Starting-point records	21
2.4.4 End-point records	22
2.4.5 Methods required for integrating source files	22
3. MUTATIONS IN SOMATIC CELLS	25
3.1 General considerations	25
3.1.1 End-points	25
3.1.2 Study requirements	26
3.2 Chromosomal end-points	29
3.2.1 Structural aberrations	29
3.2.1.1 Methods of culture	29
3.2.1.2 Fixation and slide preparation	32
3.2.1.3 Analysis of cells	32
3.2.1.4 Data analysis	41

The International Programme on Chemical Safety (IPCS) is a joint venture of the United Nations Environment Programme, the International Labour Organization, and the World Health Organization. The main objective of the IPCS is to carry out and disseminate evaluations of the effects of chemicals on human health and the quality of the environment. Supporting activities include the development of epidemiological, experimental laboratory, and risk-assessment methods that could produce internationally comparable results, and the development of manpower in the field of toxicology. Other activities carried out by IPCS include the development of know-how for coping with chemical accidents, coordination of laboratory testing and epidemiological studies, and promotion of research on the mechanisms of the biological action of chemicals.
