

Other titles available in the ENVIRONMENTAL HEALTH CRITERIA series include:

1. Mercury
2. Polychlorinated Biphenyls and Terphenyls
3. Lead
4. Oxides of Nitrogen
5. Nitrates, Nitrites, and N-Nitroso Compounds
6. Principles and Methods for Evaluating the Toxicity of Chemicals, Part 1
7. Photochemical Oxidants
8. Sulfur Oxides and Suspended Particulate Matter
9. DDT and its Derivatives
10. Carbon Disulfide
11. Mycotoxins
12. Noise
13. Carbon Monoxide
14. Ultraviolet Radiation
15. Tin and Organotin Compounds
16. Radiofrequency and Microwaves
17. Manganese
18. Arsenic
19. Hydrogen Sulfide
20. Selected Petroleum Products
21. Chlorine and Hydrogen Chloride
22. Ultrasound
23. Lasers and Optical Radiation
24. Titanium
25. Selected Radionuclides
26. Styrene
27. Guidelines on Studies in Environmental Epidemiology
28. Acrylonitrile
29. 2,4-Dichlorophenoxyacetic Acid (2,4-D)
30. Principles for Evaluating Health Risks to Progeny Associated with Exposure to Chemicals during Pregnancy
31. Tetrachloroethylene
32. Methylene Chloride
33. Epichlorohydrin
34. Chlordane
35. Extremely Low Frequency (ELF) Fields
36. Fluorine and Fluorides
37. Aquatic (Marine and Freshwater) Biotoxins
38. Heptachlor
39. Paraquat and Diquat
40. Endosulfan
41. Quintozone
42. Tecnazene
43. Chlordecone

	<u>Page</u>
ENVIRONMENTAL HEALTH CRITERIA FOR MAN-MADE MINERAL FIBRES	
1. SUMMARY	11
1.1 Identity, terminology, physical and chemical properties, analytical methods	11
1.2 Sources of human and environmental exposure	11
1.3 Environmental transport, distribution, and transformation	12
1.4 Environmental concentrations and human exposure	12
1.5 Deposition, clearance, retention, durability, and translocation	13
1.6 Effects on experimental animals and <i>in vitro</i> test systems	14
1.7 Effects on man	16
1.8 Evaluation of human health risks	18
1.8.1 Occupationally exposed populations	18
1.8.2 General population	19
2. IDENTITY, PHYSICAL AND CHEMICAL PROPERTIES, ANALYTICAL METHODS	20
2.1 Identity, terminology, physical and chemical properties	20
2.2 Production methods	22
2.2.1 General	22
2.2.2 Historical	28
2.3 Analytical methods	28
2.3.1 Air	28
2.3.2 Biological materials	31
3. SOURCES OF HUMAN AND ENVIRONMENTAL EXPOSURE	33
3.1 Production	33
3.2 Uses	34
3.3 Emissions into the environment	35
4. ENVIRONMENTAL TRANSPORT, DISTRIBUTION, AND TRANSFORMATION	36
5. ENVIRONMENTAL CONCENTRATIONS AND HUMAN EXPOSURE	37

The **International Programme on Chemical Safety (IPCS)** is a joint venture of the United Nations Environment Programme, the International Labour Organization, and the World Health Organization. The main objective of the IPCS is to carry out and disseminate evaluations of the effects of chemicals on human health and the quality of the environment. Supporting activities include the development of epidemiological, experimental laboratory, and risk-assessment methods that could produce internationally comparable results, and the development of manpower in the field of toxicology. Other activities carried out by the IPCS include the development of know-how for coping with chemical accidents, coordination of laboratory testing and epidemiological studies, and promotion of research on the mechanisms of the biological action of chemicals.
