CONTENTS

The **International Programme on Chemical Safety (IPCS)** is a joint venture of the United Nations Environment Programme, the International Labour Organisation, and the World Health Organization. The main objective of the IPCS is to carry out and disseminate evaluations of the effects of chemicals on human health and the quality of the environment. Supporting activities include the development of epidemiological, experimental laboratory, and risk-assessment methods that could produce internationally comparable results, and the development of manpower in the field of toxicology. Other activities carried out by the IPCS include the development of know-how for coping with chemical accidents, coordination of laboratory testing and epidemiological studies, and promotion of research on the mechanisms of the biological action of chemicals.

ENVIRONMENTAL HEALTH CRITERIA FOR VANADIUM	
1. SUMMARY AND CONCLUSIONS	11
1.1 Identity, physical and chemical properties, analytical methods	11
1.2 Sources in the environment, environmental transport and distribution	12
1.3 Environmental levels and human exposure	13
1.4 Kinetics and metabolism	14
1.5 Effects on experimental animals and <i>in vitro</i> test systems	14
1.6 Effects on man	16
1.6.1 Local effects and dose-response relationships	16
1.6.2 Systemic effects and dose-response relationships	17
1.7 Evaluation of health risks for man	18
2. IDENTITY, PHYSICAL AND CHEMICAL PROPERTIES, ANALYTICAL METHODS	20
2.1 Identity	20
2.2 Physical and chemical properties	20
2.3 Analytical methods	21
2.3.1 Atomic absorption analysis and emission spectrometry	21
2.3.2 Neutron activation analysis	23
2.3.3 Spark-source mass spectrometry	23
2.3.4 Spectrophotometric analysis	24
2.3.5 Electrochemical methods	25
2.3.6 Chromatography	25
3. SOURCES IN THE ENVIRONMENT, ENVIRONMENTAL TRANSPORT AND DISTRIBUTION	26
3.1 Natural occurrence	26
3.1.1 Rocks	26
3.1.2 Soils	26
3.1.3 Water	27
3.1.4 Air	27
3.1.5 Plants	27
3.1.6 Animals	29
3.2 Man-made sources	31
