

Other titles available in the ENVIRONMENTAL HEALTH CRITERIA series include:

1. Mercury
2. Polychlorinated Biphenyls and Terphenyls
3. Lead
4. Oxides of Nitrogen
5. Nitrates, Nitrites, and N-Nitroso Compounds
6. Principles and Methods for Evaluating the Toxicity of Chemicals, Part 1
7. Photochemical Oxidants
8. Sulfur Oxides and Suspended Particulate Matter
9. DDT and its Derivatives
10. Carbon Disulfide
11. Mycotoxins
12. Noise
13. Carbon Monoxide
14. Ultraviolet Radiation
15. Tin and Organotin Compounds
16. Radiofrequency and Microwaves
17. Manganese
18. Arsenic
19. Hydrogen Sulfide
20. Selected Petroleum Products
21. Chlorine and Hydrogen Chloride
22. Ultrasound
23. Lasers and Optical Radiation
24. Titanium
25. Selected Radionuclides
26. Styrene
27. Guidelines on Studies in Environmental Epidemiology
28. Acrylonitrile
29. 2,4-Dichlorophenoxyacetic Acid (2,4-D)
30. Principles for Evaluating Health Risks to Progeny Associated with Exposure to Chemicals during Pregnancy
31. Tetrachloroethylene
32. Methylene Chloride
33. Epichlorohydrin
34. Chlordane
35. Extremely Low Frequency (ELF) Fields
36. Fluorine and Fluorides
37. Aquatic (Marine and Freshwater) Biotoxins
38. Heptachlor
39. Paraquat and Diquat
40. Endosulfan
41. Quintozene
42. Tecnazene
43. Chlordecone

Environmental Health Criteria 83

DDT AND ITS DERIVATIVES - ENVIRONMENTAL ASPECTS

Published under the joint sponsorship of
the United Nations Environment Programme,
the International Labour Organisation,
and the World Health Organization

World Health Organization
Geneva, 1989

The **International Programme on Chemical Safety (IPCS)** is a joint venture of the United Nations Environment Programme, the International Labour Organization, and the World Health Organization. The main objective of the IPCS is to carry out and disseminate evaluations of the effects of chemicals on human health and the quality of the environment. Supporting activities include the development of epidemiological, experimental laboratory, and risk-assessment methods that could produce internationally comparable results, and the development of manpower in the field of toxicology. Other activities carried out by the IPCS include the development of know-how for coping with chemical accidents, coordination of laboratory testing and epidemiological studies, and promotion of research on the mechanisms of the biological action of chemicals.

CONTENTS

ENVIRONMENTAL HEALTH CRITERIA FOR DDT AND ITS DERIVATIVES - ENVIRONMENTAL ASPECTS

1. SUMMARY AND CONCLUSIONS	9
1.1 Physical and chemical properties	9
1.2 Uptake, accumulation, and degradation	9
1.3 Toxicity to microorganisms	9
1.4 Toxicity to aquatic invertebrates	10
1.5 Toxicity to fish	10
1.6 Toxicity to amphibians	10
1.7 Toxicity to terrestrial invertebrates	11
1.8 Toxicity to birds	11
1.9 Toxicity to non-laboratory mammals	11
2. PHYSICAL AND CHEMICAL PROPERTIES OF DDT AND RELATED COMPOUNDS	12
3. KINETICS, METABOLISM, BIOTRANSFORMATION, AND BIOACCUMULATION	14
3.1 Retention in soils and sediments and plant uptake	14
3.2 Uptake and accumulation by organisms	15
3.2.1 Plants	21
3.2.2 Microorganisms	21
3.2.3 Aquatic invertebrates	22
3.2.4 Fish	22
3.2.5 Terrestrial invertebrates	23
3.2.6 Birds	24
3.2.7 Mammals	24
4. TOXICITY TO MICROORGANISMS	26
4.1 Bacteria and cyanobacteria (blue-green algae)	26
4.2 Freshwater microorganisms	27
4.3 Marine microorganisms	27
4.4 Soil microorganisms	28
4.5 Fungi	28
5. TOXICITY TO AQUATIC ORGANISMS	29
5.1 Aquatic invertebrates	29
5.1.1 Short-term and long-term toxicity	29
5.1.2 Physiological effects on aquatic invertebrates	30
