

Other titles available in the ENVIRONMENTAL HEALTH CRITERIA series include:

1. Mercury
2. Polychlorinated Biphenyls and Terphenyls
3. Lead
4. Oxides of Nitrogen
5. Nitrates, Nitrites, and N-Nitroso Compounds
6. Principles and Methods for Evaluating the Toxicity of Chemicals, Part 1
7. Photochemical Oxidants
8. Sulfur Oxides and Suspended Particulate Matter
9. DDT and its Derivatives
10. Carbon Disulfide
11. Mycotoxins
12. Noise
13. Carbon Monoxide
14. Ultraviolet Radiation
15. Tin and Organotin Compounds
16. Radiofrequency and Microwaves
17. Manganese
18. Arsenic
19. Hydrogen Sulfide
20. Selected Petroleum Products
21. Chlorine and Hydrogen Chloride
22. Ultrasound
23. Lasers and Optical Radiation
24. Titanium
25. Selected Radionuclides
26. Styrene
27. Guidelines on Studies in Environmental Epidemiology
28. Acrylonitrile
29. 2,4-Dichlorophenoxyacetic Acid (2,4-D)
30. Principles for Evaluating Health Risks to Progeny Associated with Exposure to Chemicals during Pregnancy
31. Tetrachloroethylene
32. Methylene Chloride
33. Epichlorohydrin
34. Chlordane
35. Extremely Low Frequency (ELF) Fields
36. Fluorine and Fluorides
37. Aquatic (Marine and Freshwater) Biotoxins
38. Heptachlor
39. Paraquat and Diquat
40. Endosulfan
41. Quintozene
42. Technazene
43. Chlordecone

continued on p. 116

CONTENTS

**ENVIRONMENTAL HEALTH CRITERIA
FOR MERCURY - ENVIRONMENTAL ASPECTS**

1. SUMMARY AND CONCLUSIONS	9
1.1 Physical and chemical properties	9
1.2 Sources in the environment	9
1.3 Uptake, elimination, and accumulation in organisms	9
1.4 Toxicity to microorganisms	10
1.5 Toxicity to aquatic organisms	10
1.6 Toxicity to terrestrial organisms	10
1.7 Effects of mercury in the field	11
2. PHYSICAL AND CHEMICAL PROPERTIES	12
3. SOURCES OF MERCURY IN THE ENVIRONMENT	13
3.1 Natural and anthropogenic sources and cycling	13
3.2 Speciation	13
3.3 Levels in the environment	14
3.4 Methylation of mercury	15
4. UPTAKE, LOSS, AND ACCUMULATION IN ORGANISMS	16
4.1 Speciation of mercury	25
4.2 Uptake and loss in aquatic organisms	26
4.2.1 Microorganisms, plants, and invertebrates	26
4.2.2 Fish	28
4.2.2.1 Effects of environmental variables on uptake by fish	30
4.2.3 Studies on more than one type of organism	31
4.3 Uptake and loss in terrestrial organisms	32
4.4 Accumulation in the field	35
4.4.1 General exposure	35
4.4.2 Mercury manufacturing and general industrial areas	37
4.4.3 Mining activity	38
4.4.4 Chloralkali plants	39
4.4.5 Mercurial fungicides	40
5. TOXICITY TO MICROORGANISMS	41
5.1 Toxicity of inorganic mercury	41
5.1.1 Single species cultures	41
5.1.2 Mixed cultures and communities	44

The **International Programme on Chemical Safety (IPCS)** is a joint venture of the United Nations Environment Programme, the International Labour Organization, and the World Health Organization. The main objective of the IPCS is to carry out and disseminate evaluations of the effects of chemicals on human health and the quality of the environment. Supporting activities include the development of epidemiological, experimental laboratory, and risk-assessment methods that could produce internationally comparable results, and the development of manpower in the field of toxicology. Other activities carried out by the IPCS include the development of know-how for coping with chemical accidents, coordination of laboratory testing and epidemiological studies, and promotion of research on the mechanisms of the biological action of chemicals.
